SUMMARY

Enthusiastic Master's student in Business Analytics with two years of experience in data analytics and application development. Skilled in using statistical methods and data visualization tools to derive insights that drive business decision-making. Eager to apply advanced analytics and technical expertise to solve real-world business problems and support organizational goals.

EDUCATION

📅 08/2024 – 05/2026 📍 BOSTON, MA

MS in Applied Business Analytics Boston University

- Statistical Analysis, Machine Learning, Data Mining, Business Process Optimization

📅 01/2020 – 01/2022 📍 BOSTON, MA

Bachelor of Science in Computer Science Boston University

- Probability & Statistics, Data Structures, Database Management, Programming.

SKILLS

- **Programming Languages:** SQL, R, C#, Python, Quarto
- **Software:** MS Power BI, MS SSRS Report Builder, Excel, PyCharm CE, RStudio

EXPERIENCE

📅 10/2022 – PRESENT 📍 BOSTON, MA

Data Processing System Analytics Boston Police Department

- Developed and maintained high-quality software applications using C# .NET and ASP.NET, contributing to a 20% improvement in system efficiency.
- Managed the creation of reporting tools using Microsoft SQL Server Reporting Services (SSRS) and SQL, enabling actionable insights and contributing to a 30% increase in customer satisfaction.
- Directed the design of intuitive user interfaces and data visualizations with Airtable, which enhanced the user experience and improved decision-making efficiency for stakeholders by 25%.
- Analyzed business workflows, recommending and implementing technology solutions that reduced manual processes by 15% and improved department productivity.

PROJECTS

The World Happiness Report 2015

- Studied the objective factors influencing happiness worldwide, such as Economy (GDP growth), Family, government, health, etc.
- Collected and cleaned data using R programming, GDP per capita, social support, life expectancy, and corruption perceptions.
- Visualized correlations between happiness and the top factors such as social support and GDP using Correlogram and Matplotlib for data-driven insights.
- Presented findings in a comprehensive report, including data visualizations and actionable recommendations for policymakers.
- Identified that social support and life expectancy were the strongest predictors of happiness, with GDP contributing but less strongly than expected. Provided key insights into policy areas for improving national well-being.

NYC Real Estate Market in Bay Ridge Neighborhood

- Studied housing market trends in Bay Ridge, Brooklyn, to assist potential homebuyers and investors make data-driven decisions.
- Used Power BI to illustrate data visualizations highlighting KPIs, including the total volume of residential sales in 2023 and the growth or reduction of the market from 2019 to 2023.
- Applied K-means clustering to group properties into different segments based on key features (e.g., price, size, location, and property type).
- Built a predictive model using linear regression and time-series forecasting techniques to estimate future price trends in Bay Ridge.
- Advised investors to consider long-term rentals due to the steady growth in rental prices, while homebuyers were encouraged to act quickly to avoid rising prices.
- Discovered a 10% year-over-year increase in median home prices in Bay Ridge, driven by increased demand for family-sized housing units. Provided data-backed recommendations for investors and buyers regarding the optimal time for purchase or rental decisions.

AWARDS

12/2023

Boston Police Department

Instrumental in the creation and development of a user-friendly multistep data collection process to aid in the recertification of Boston Police Officers by the Massachusetts Peace Officer Standards and Training Commission.
